

Solution Requirements

Date	11 July 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Allow users to securely access the application and maintain session history.	High
2	Event Analysis	Analyze networking event descriptions using Google Gemini AI and identify important topics.	High
3	Conversation Starter Generation	Generate personalized conversation starters based on event details and user interests.	High
4	Fact Verification	Verify networking-related information using AI before presenting results to users.	High
5	Contact History Management	Save previous conversations and networking interactions for future reference.	Medium
6	Dashboard	QDisplay event analysis, AI suggestions, and networking history in a user-friendly dashboard.	Medium
7	Reporting	Generate summaries of user interactions and networking activities.	High
8	Error Handling	Display meaningful messages when API requests fail or invalid input is received.	Medium

Technology Stack

Date	11 July 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Streamlit	Provides an interactive and responsive web interface that allows users to analyze networking events, generate conversation starters, verify facts, and view networking history without requiring frontend framework expertise.
2	Backend / Server-Side	Python 3.10+ with FastAPI	FastAPI offers high-performance REST APIs, automatic Swagger documentation, asynchronous request handling, and seamless integration with AI services like Google Gemini.
3	Database / Data Storage	SQLite (PostgreSQL-ready)	Stores user interaction history, session details, event information, and generated conversation suggestions. The design can later be migrated to PostgreSQL or MongoDB for larger deployments.
4	AI Integration	Google Gemini API	Generates personalized conversation starters, analyzes event descriptions, verifies information, and provides intelligent networking recommendations using generative AI.
5	Version Control	Git & GitHub	Enables collaborative development, version tracking, issue management, and code reviews among team members.
6	Deployment	Docker (Optional), Localhost	Docker simplifies deployment across environments while localhost supports development and testing. Future deployment can use Google Cloud Run or Render.
